Git cheat sheet

Vincevrp

Abstract

Quick reference for git commands that aren't covered on a daily basis. Basic git knowledge is required.

Contents

1 Undo unpushed commits

To delete the most recent commit, keeping the work you've done:

```
git reset --soft HEAD~1
```

To delete the most recent commit, **destroying** the work you've done:

```
git reset --hard HEAD~1
```

Source

2 Rebase from upstream

This allows you to pull changes made in the original repository into your fork.

```
git remote add upstream git@github.com:X/X.git
git fetch upstream
git rebase upstream/master
```
