Docker cheat sheet

Vincevrp

Abstract

Quick reference for common Docker commands. Basic docker knowledge is required.

Contents

1 Start container with shell

```
docker run -it image-name /bin/bash
```

2 Kill all containers

```
docker kill $(docker ps -q)
```

3 Cleaning up

Delete all docker containers:

```
docker rm $(docker ps -a -q)
```

Delete all docker images:

```
docker rmi $(docker images -q)
```

Delete all untagged docker images:

```
docker rmi $(docker images -q -f dangling=true)
```

Delete all unused local volumes:

```
docker volume prune
```

Delete all unused networks:

```
docker network prune
```
